

# Wi-Fi for Small Business

## How Can Small Businesses Benefit from Wireless Connections?

### *Enhancing the Office Experience*

Healthcare providers with wireless internet are more efficient, providing employees with easy access to patient records from anywhere in the facility through use of a tablet, or other portable device.

### *Spurring Higher Sales*

Potential customers that are met with wireless technologies, such as a hand-held POS system while checking out at a busy retail store, or taking an order at a fast-paced restaurant enjoy the benefits of a pleasant and convenient experience.

### *Promoting Productivity*

Workers who log in to the Wi-Fi on their phones will be able to communicate with each other and access information relevant to their jobs much more easily and from a wider range of locations.

## How Much Does Wi-Fi Cost for a Business?

The price of wireless service varies considerably based on your location and the nature of your connection. In general, the monthly cost of Wi-Fi ranges from \$70 to \$400 if you use cable internet. You can obtain it for between \$50 and \$90 a month if you use DSL.
